

DT2630

Duct Temperature

The DT2630 is a battery operated wireless duct sensor that gives the flexibility and ease of installation for monitoring duct temperatures wirelessly using 900MHz spread spectrum technology rather than costly hardwire installations. The single point probe is 0.25" O.D., made of 304 stainless steel, and is available in 4", 6", 8", 12", and 18" lengths to fit most applications. The DT2630 can be ordered with the standard enclosure or NEMA 4X enclosure depending on the specifications required. The DT2630 will send the temperature wirelessly to the RM2432D receiver that converts the wireless signal to voltage input for use with a DDC controller, or to a transceiver which will send the data to a BAS using BACnet, Modbus, or Lonworks protocol.

Transmission distance in a typical building is 200-300 feet horizontal depending on the layout and construction of the building, and one floor above and one floor below the transceiver. Sensor distance and reliability can be increased with the addition of a RR2552B(s) repeater.

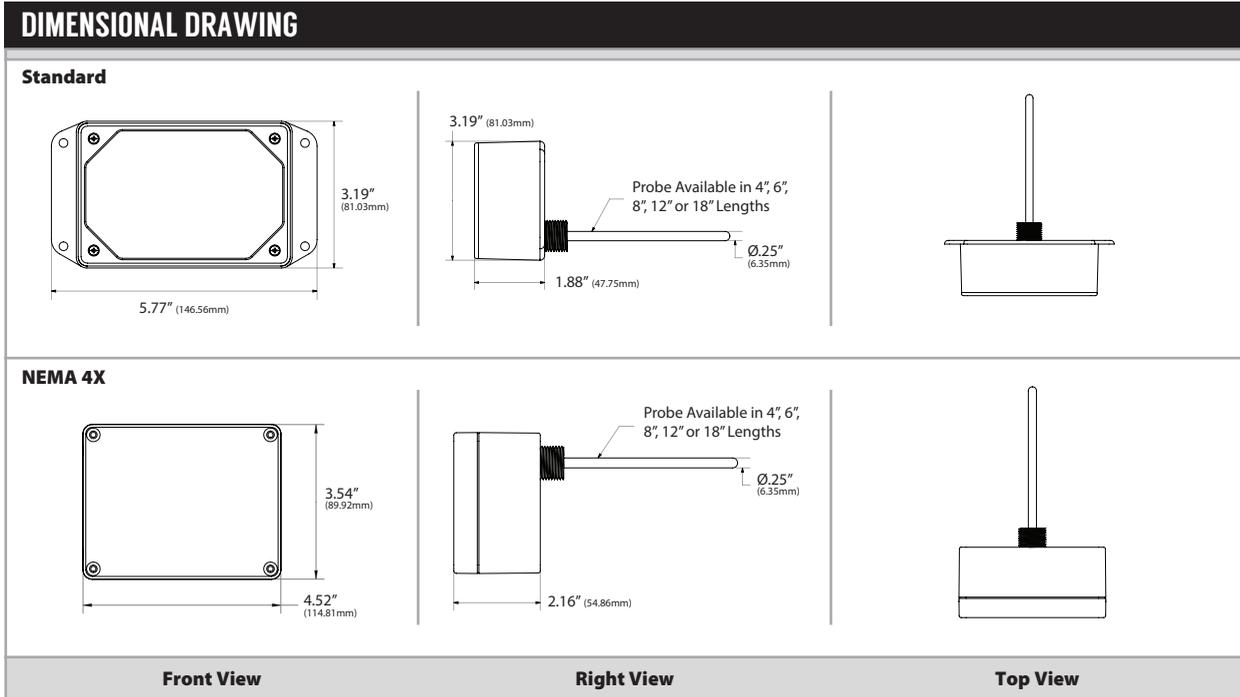

Applications: Museums, Churches, Historical Buildings & New Construction

The DT2630 is covered by ACI's Two (2) Year Limited Warranty. The warranty can be found in the front of ACI's Sensors & Transmitters catalog, as well as on ACI's website, www.workaci.com.
