SIEMENS 4⁴²⁰

Acvatix™

3-port seat valves PN10 with VXF31.. flanged connection

- Grey cast iron EN-GJL-250 valve body
- DN 15...150
- k_{vs} 2.5...315 m³/h
- Can be equipped with SAX..-electromotoric or SKD..-, SKB..- and SKC..- electrohydraulic actuators

Use

For use in heating, ventilating and air conditioning systems as a control valve for "mixing" or "diverting" functions.

For closed circuits only.

DN = Nominal size

Accessories

| Product number | Stock No. | Description |
|----------------|-------------|---|
| ASZ6.5 | ASZ6.5 | Electric stem heating element, AC 24 V / 30 W, required for media |
| | | below 0 °C. For electrohydraulic actuators SKD, SKB, SKC |
| ASZ6.6 | S55845-Z108 | Electric stem heating element, AC 24 V 30 W, required for media |
| | | below 0 °C |

Ordering

| Example: | Product number | Stock number | Designation | Quantity |
|----------|----------------|--------------|--|----------|
| | VXF31.50 | VXF31.50 | 3-port seat valve PN10 with flanged connection | 1 |

Delivery

Valves, actuators and accessories are packed and supplied separately. The valves are supplied without counter-flanges and without flange gaskets.

Spare parts, Rev. no.

See overview, page 10.

 k_{vs} = Nominal flow rate of cold water (5...30 °C) through the fully open valve (H₁₀₀) by a differential pressure of 100 kPa (1 bar)

 $S_v = Rangeability k_{vs} / k_{vr}$

 k_{vr} = Smallest k_v value, at which the flow characteristic tolerances can still be maintained, by a differential pressure of 100 kPa (1 bar)

| VXF31.150-315 | | | | | | | | 100 | 50 | | | |

¹⁾ Usable up to maximum medium temperature of 150 °C

If noise is permitted, the same values apply as for mixing.

 H_{100} = Nominal stroke Δp_{max} = Maximum permissible differential pressure across the valve (mixing: port A-AB, B-AB , diverting: port AB-A, AB-B), valid for the entire actuating range of the motorized valve

Actuator overview

Actuators SAX81.. and SAX61.. are UL listed

Pneumatic actuators

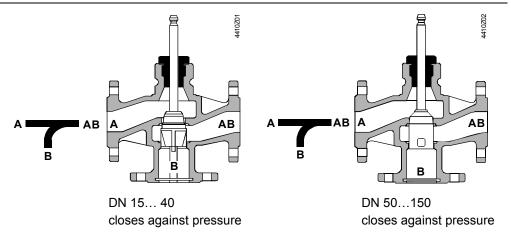

Available on request from your local office.

Application is possible only if the VXF31.. is used as a mixing valve.

Technical design / mechanical design

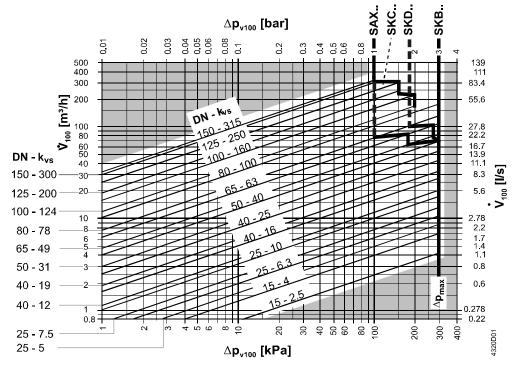

Valve cross section

Guided plug which is integrated in the valve stem. The seats are machined in the valve body. Schematic representation, design variations are possible.

 $^{^{1)}}$ or DC 4...20 mA or 0...1000 Ω

Flow diagram "Mixing"

Δp_{max} = Maximum permissible differential pressure across the valve (mixing: port A-AB, B-AB, diverting:

port AB-A, AB-B), valid for the entire actuating range of the motorized valve

 Δp_{v100} = Differential pressure across the fully open valve and the valve's control path A \rightarrow AB, B \rightarrow AB

by a volume flow V₁₀₀

 \dot{V}_{100} = Volumetric flow through the fully open valve (H₁₀₀)

100 kPa = 1 bar \approx 10 mWC 1 m³/h = 0.278 l/s water at 20 °C

Valve flow characteristic

Through-port

0...30 % linear

30...100 % $n_{gl} = 3 \text{ as per VDI / VDE } 2173$

k_{vs}-values 100, 160, 250, 315 m³/h:

 $0...30 \% \rightarrow linear$

 $30...75 \% \rightarrow \text{equal-percentage } (n_{gl} = 3)$

as per VDI / VDE 2173

75...100 % \rightarrow optimized for maximal flow k_{v100}

Bypass

0...100 %: linear

Mixing: Flow from port A and port

B to port AB

Diverting: Flow from port AB

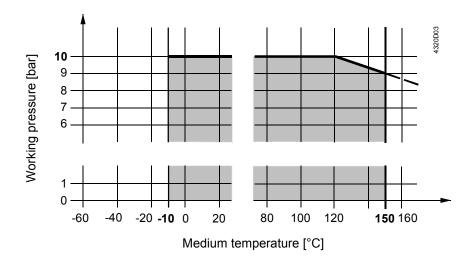

to port A and port B

Port AB = constant flow Port A = variable flow

Port B = bypass (variable flow)

Use the 3-port valve primarily as a mixing valve.

Working pressure and medium temperature

Working pressure and medium temperature staged as per ISO 7005

Current local legislation must be observed.

Notes

Engineering

We recommend installation in the return pipe, as the temperatures in this pipe are lower for applications in heating systems, which in turn, extends the stem sealing gland's life.

Always use a strainer upstream of the valve to increase the valve's functional safety.

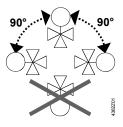

For media below 0 $^{\circ}$ C, use the electric stem heating element to prevent the valve stem from freezing in the sealing gland. For safety reasons, the stem heating element has been designed for AC 24 V / 30 W operating voltage.

Mounting

Both valve and actuator can easily be assembled at the mounting location. Neither special tools nor adjustments are required.

The valve is supplied with Mounting Instructions 74 319 0519 0.

Orientation

Direction of flow

When mounting, pay attention to the valve's flow direction symbol \rightarrow .

Mixing from A / B to AB

Diverting from AB to A / B

Commissioning

Commission the valve only if the actuator has been mounted correctly.

Valve stem retracts: through-port A - AB opens, bypass B closes Valve stem extends: through-port A - AB closes, bypass B opens

Warning

VXF31.. valves require no maintenance.

When doing service work on the valve / actuator:

- Deactivate the pump and turn off the power supply
- · Close the shutoff valves
- Fully reduce the pressure in the piping system and allow pipes to completely cool down

If necessary, disconnect the electrical wires.

Before putting the valve into operation again, make certain the actuator is correctly fitted.

Stem sealing gland

The glands can be exchanged without removing the valve, provided the pipes are depressurized and cooled off and the stem surface is unharmed.

If the stem is damaged in the gland range, replace the entire stem-plug-unit. Contact your local office or branch.

Disposal

Before disposal the valve must be dismantled and separated into its various constituent materials.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view.

Current local legislation must be observed.

Warranty

The technical data given for these applications is valid only in conjunction with the Siemens actuators as detailed under "Equipment combinations", page 3. All terms of the warranty will be invalidated by the use of actuators from other manufacturers.
